The RiskIntegrity™ for LDTI solution helps insurance companies address the new Financial Accounting Standards Board (FASB) Long Duration Targeted Improvements (LDTI) requirements. RiskIntegrity for LDTI is part of a comprehensive LDTI solution offered by Moody’s Analytics that includes the AXIS™ actuarial system and AXIS GAAP Link products.

Kick-start your LDTI implementation with a modular, end-to-end solution

- Perform detailed analysis at multiple levels from entity- or cohort-level disclosures, and analyze changes in future policy benefits, policyholder account balances, market risk benefits, and deferred acquisition costs
- Capture granular input from AXIS actuarial system products and other actuarial modeling tools
- Visualize and analyze opening and closing reserves to validate LDTI reserves and provide drill-down reporting by entity, portfolio, and cohort
- Support a collaborative environment for actuaries and accountants to review current period financials and compare against prior submissions
- Create mapping between your own chart of accounts and the solution’s fast, intuitive accounting logic
- Generate journal entries—first in a soft-posting environment—where you can validate the journal through automated reconciliation rules and visual analysis, to subsequently hard-post the journal in the insurance subledger
» Visualize drivers of reserve change with granular drill-down (cohort/policy level) and reconciliation between actuarial calculations and account balances using our Actuarial and Accounting dashboards

» Generate period closure transactions to recognize profit or loss over the period on the insurance subledger level and ensure period end reconciliation between the subledger and your general ledger
» Recognize intercompany transactions, perform eliminations, and present an insurance subledger-level consolidated statement preview

» Verify the consistency, quality, and accessibility of finance and actuarial data (both current and historic) using centralized data storage and data quality management

» Take advantage of support for all long-duration contracts as specified by ASC 944, including: 1) universal life-type contracts; 2) annuitization, death, or other insurance benefits; 3) investment-type contracts; 4) market risk benefits; 5) variable annuity and variable life insurance separate account structures; and 6) participating life insurance contracts

**The RiskIntegrity for LDTI solution difference**

» Seamless integration with our AXIS actuarial system, including built-in data links for other actuarial modeling tools

» Out-of-the-box reports, chart of accounts, and posting logic and analytical capabilities that help clients address initial LDTI requirements and interpretations, and a commitment to address future updates from the Financial Accounting Standards Board

» Integration that maximizes the return on your investment in existing actuarial models, accounting systems, and processes that are unified by a robust data dictionary
Future-proof technology that is cloud-enabled, highly scalable, modular, and designed to address the demanding data volume and performance requirements of LDTI.

Our history of delivering high-performance, cloud-based, and award-winning solutions to the insurance industry for CECL, IFRS 9, IFRS 17, Solvency II, and other regulatory regimes.
